Summary

Software developer, with meaningful experience with software engineering and working with DevOps principles and developing self-sufficient teams through agile methods. I'm really passionate about technologies and the incredible things we can do with them. Throughout my life, I've had the opportunity to work and share knowledge with amazing people who have helped me to create well designed, scalable, accessible and trustworthy products.

- Dev Lead of front-end development of core projects;
- Being part of self-sufficient teams, with multi-disciplinary devs, sharing knowledge and responsibilities;

Motivations

- Working with accessibility;
- Automating process;
- Being able to help people to improve;
- Instead of delivering the best product full of features, delivering something that brings value to my clients;
- Challenges - "We don't grow when things are easy, we grow when we face challenges.";
- Being able to speak my mind in order to grow as a team, even if it means to disagree;
- Learning - I like to learn new things, from python to cooking;
- Work with people that don't settle, always aiming to be the best we can be;

Education

Bachelor in System Analysis

2012 - 2018

Unisul
